SUMMARY

Recent coding boot camp graduate chasing my coding dreams. Incredibly ambitious, results driven, and fiercely passionate about coding and people-technology synergy. I aim for "bridging the gap" by developing creative solutions that help people solve real-world problems. I've recently taken a risk and moved across the country to fulfill my career aspirations by completing a coding boot camp at the University of Texas. Seeking opportunities at a similarly aligned company.

WORK EXPERIENCE

IT Project Manager

October 2017 – February 2018

Cincinnati Bell Technology Solutions (CBTS)

6-month, contracted assignment for Mercy Health

- Successfully delivered software and infrastructure projects ahead of schedule and under budget for a multi-market health system. Major project was a 6-month scheduled, 20-server remediation project that spanned across all 7-markets. Challenges included coordination of markets and impacting patient care. Identified areas of server consolidation, which ultimately saved several thousands of dollars in additional hardware and licensing fees. Project was delivered on time and under budget.
- Worked cross-functionally as part of a PMO team and directly with software engineers, solidifying my desires to become a web developer

IT Solutions Manager

September 2015 – September 2017

Standard Textile

- Promoted position, reported to VP of IT. Project and personnel manager for a team of 5 direct reports (software engineers) responsible for all managing all manufacturing division technologies as well as all laundry business systems (LBS) technologies.
- Routinely met with divisional managers and laundry customers to ascertain problems and provide IT solutions. Worked directly with software engineers for routine IT systems upgrades, third party software implementations, and/or provided custom solutions with in-house developed IT systems (defined below). Required frequent travel to remote sites worldwide.
- Successful software implementation of Advance Plant Resources (APR) system in all global manufacturing sites (US, Jordan, China), which by harnessing the power of IoT, provided a dashboard of real-time production data and reporting, helping managers make better strategic decisions.
- Project managed a successful 8-month long implementation of a third-party materials requirement planning system (MRP) at plants. Significantly reduced raw materials inventory and increased WIP visibilities. Integration with existing ERP and APR systems proved challenging but successful.

IT Training & Support Manager

June 2012 – September 2015

Standard Textile

- Responsible for providing level 1 technical support to over 3,000 global associates and managing a helpdesk with 3 direct reports.
- Reduced response time by 93%, coordinated support efforts during Office 365 email migration, vendor management
- Responsible for all global IT training curriculum, coordinated training efforts cross-functionally, created LMS modules, tutorials.
- Recipient of 'Outstanding Trainer' and 'Excellence in Leadership' awards.

IT Communications Coordinator

October 2011 – June 2012

Standard Textile

- Responsible for drafting company-wide IT communication emails designed to introduce, sell, and explain IT systems to the business.

EDUCATION

University of Texas at Austin – Austin, TX

Full Stack Web Development Coding
Bootcamp

May 2018 – November 2018

(certificate expected)

Miami University – Oxford, OH

Bachelor of Arts in English Linguistics

January 2006 – December 2011
